

What is your topic and why did you choose it?

COVID's impact on global warming. I chose this topic because it's something that I am ignorant about and would like to know more. This is a good way to learn about a topic of interest and complete an assignment.

Provide a description of the sense of scope, and needs/resources for the project. What are you going to say about it, and what do you need to help express it?

The 'scope' will be the general global scale impact that COVID has caused and most resources for the project can be gleaned from Google or other news sources. I am going to relate the negative impacts (if any) and positive impacts of COVID on global warming as well as the steps the international community has taken to ensure positive work is being done towards global warming. Interestingly, an unrelated step in the right direction is joining the Paris climate agreement which acts to lighten the impact of climate change on the world. In the last few years, we have already seen videos of tremendous glaciers melting or splitting from the base land. At this rate, coastal cities will be swallowed up and submerged in water. The needs I require are research papers, news articles, and Google to help identify and relate these issues. These are some of the topics I am going to talk about related to this project.
